Azure VM Backup & Recovery

A simple evidence report showing that VM-1 was backed up, restored after deletion, and verified to run Windows.

BACKUP	RECOVERY POINT	RESTORE + WINDOWS
Completed	AppConsistent	Verified

Setup
Resource group: Backup-RG
VMs: VM-1 and VM-2; Windows Server 2022 Datacenter
VM size used: Standard_B2als_v2
Vault: Vault-Central; policy: DefaultPolicy
Restore target: VM-1-Restored

What was tested
Both VMs had backup protection configured. VM-1 had a completed backup, an application-consistent recovery point, a completed restore, and a successful Windows response.

Scope
This is a lab demonstration. VM-2 recovery and application-data integrity were not tested.

Reading guide: Pages 2-23 contain all 22 supplied screenshots in upload order, with short explanations. Pages 24-25 provide verification steps and final results. Browser chrome is cropped; credentials and subscription identifiers are redacted. One repeated capture is retained and labeled.

01 Choose the region and create two VMs

Check the allowed regions, choose centralindia, and create VM-1 and VM-2.

```
    raise RuntimeError("The content for this response was already consumed")
RuntimeError: The content for this response was already consumed
To check existing issues, please visit: https://github.com/Azure/azure-cli/issues
saqib [ ~ ]$ az policy assignment list --query "[? parameters.listOfAllowedLocations.value!=null].parameters.listOfAllowedLocations.value[]" -o tsv
malaysiawest
indiasouthcentral
koreacentral
eastasia
centralindia
saqib [ ~ ]$ for i in {1..2}; do az vm create -g Backup-RG -n VM-$i --image Win2022Datacenter --admin-username studentadmin --admin-password [PASSWORD REDACTED] --size Standard_B2als_v2 --
location centralindia --no-wait; done
Consider upgrading security for your workloads using Azure Trusted Launch VMs. To know more about Trusted Launch, please visit https://aka.ms/TrustedLaunch.
Consider upgrading security for your workloads using Azure Trusted Launch VMs. To know more about Trusted Launch, please visit https://aka.ms/TrustedLaunch.
saqib [ ~ ]$ az vm list -g Backup-RG -d --query "[].{Name:name, Status:powerState, Provisioning:provisioningState}" -o table
Name    Status      Provisioning
------  ----------  --------------
VM-1    VM running  Succeeded
VM-2    VM running  Succeeded
saqib [ ~ ]$ az backup vault create -g Backup-RG -n Vault-Central -l centralindia
az backup protection enable-for-vm -g Backup-RG --vault-name Vault-Central --vm VM-1 --policy-name DefaultPolicy
az backup protection enable-for-vm -g Backup-RG --vault-name Vault-Central --vm VM-2 --policy-name DefaultPolicy
{
  "etag": "W/\"datetime'2026-09-26T14%3A42%3A23.172372Z'\"",
[Account identifier redacted]
  "identity": null,
  "location": "centralindia",
  "name": "Vault-Central",
  "properties": {
    "backupStorageVersion": "Unassigned",
    "bcdrSecurityLevel": "Good",
    "costManagementSettings": {
      "granularityLevel": "VaultLevel"
    },
    "encryption": null,
    "monitoringSettings": {
      "azureMonitorAlertSettings": {
```

What this shows: Both VMs show VM running and provisioning Succeeded. The vault creation and protection commands follow. The unrelated error above the region check is not proof of a failed deployment.

02 Confirm the vault exists

Create Vault-Central in the same region as the VMs.

```
  "etag": "W/\"datetime'2026-09-26T14%3A42%3A23.172372Z'\"",
[Account identifier redacted]
  "identity": null,
  "location": "centralindia",
  "name": "Vault-Central",
  "properties": {
    "backupStorageVersion": "Unassigned",
    "bcdrSecurityLevel": "Good",
    "costManagementSettings": {
      "granularityLevel": "VaultLevel"
    },
    "encryption": null,
    "monitoringSettings": {
      "azureMonitorAlertSettings": {
        "alertsForAllFailoverIssues": "Enabled",
        "alertsForAllJobFailures": "Enabled",
        "alertsForAllReplicationIssues": "Enabled"
      },
      "classicAlertSettings": {
        "alertsForCriticalOperations": "Enabled",
        "emailNotificationsForSiteRecovery": "Enabled"
      }
    },
    "moveDetails": null,
    "moveState": null,
    "privateEndpointConnections": null,
    "privateEndpointStateForBackup": "None",
    "privateEndpointStateForSiteRecovery": "None",
    "provisioningState": "Succeeded",
    "publicNetworkAccess": "Enabled",
    "redundancySettings": {
      "crossRegionRestore": "Disabled",
      "standardTierStorageRedundancy": "GeoRedundant"
    },
    "resourceGuardOperationRequests": null,
    "restoreSettings": {
```

What this shows: The vault shows centralindia and provisioningState: Succeeded. The recorded storage redundancy is GeoRedundant; Cross Region Restore is disabled.

03 Review vault protection settings

Review the vault settings, then enable VM protection using DefaultPolicy.

```
    },
    "secureScore": "Adequate",
    "securitySettings": {
      "immutabilitySettings": null,
      "multiUserAuthorization": "Disabled",
      "softDeleteSettings": {
        "enhancedSecurityState": "AlwaysON",
        "softDeleteRetentionPeriodInDays": 14,
        "softDeleteState": "AlwaysON"
      },
      "sourceScanConfiguration": {
        "sourceScanIdentity": null,
        "state": "Disabled"
      }
    },
    "upgradeDetails": null
  },
  "resourceGroup": "Backup-RG",
  "sku": {
    "capacity": null,
    "family": null,
    "name": "Standard",
    "size": null,
    "tier": null
  },
  "systemData": null,
  "tags": null,
  "type": "Microsoft.RecoveryServices/vaults"
}
Starting in May 2025, Trusted Launch virtual machines can be protected with both standard and enhanced policies via PS and CLI
az backup vault create -g Backup-RG -n Vault-Central -l centralindia
az backup protection enable-for-vm -g Backup-RG --vault-name Vault-Central --vm VM-1 --policy-name DefaultPolicy
az backup protection enable-for-vm -g Backup-RG --vault-name Vault-Central --vm VM-2 --policy-name DefaultPolicy
```

What this shows: The capture records soft delete as AlwaysON with a 14-day retention period. It shows the protection commands; their completion is evidenced on later pages.

04 Confirm VM-1 protection

Check the ConfigureBackup job for VM-1.

```
{
  "eTag": null,
[Account identifier redacted]
[Account identifier redacted]
  "location": null,
  "name": "9de35a53-4a61-46d5-b014-8eb48d7aa652",
  "properties": {
    "actionsInfo": null,
    "activityId": "7dd9b2e0-b9b8-11f1-9009-00155d16360d",
    "backupManagementType": "AzureIaasVM",
    "containerName": "iaasvmcontainerv2;backup-rg;vm-1",
    "duration": "0:04:11.787650",
    "endTime": "2026-09-26T14:46:46.167681+00:00",
    "entityFriendlyName": "vm-1",
    "errorDetails": null,
    "extendedInfo": {
      "dynamicErrorMessage": null,
      "estimatedRemainingDuration": null,
      "internalPropertyBag": null,
      "progressPercentage": null,
      "propertyBag": {
        "Policy Name": "DefaultPolicy",
        "VM Name": "vm-1"
      },
      "tasksList": []
    },
    "isUserTriggered": null,
    "jobType": "AzureIaaSVMJob",
    "operation": "ConfigureBackup",
    "startTime": "2026-09-26T14:42:34.380031+00:00",
    "status": "Completed",
    "virtualMachineVersion": "Compute"
  },
  "resourceGroup": "Backup-RG",
  "tags": null,
```

What this shows: The job shows DefaultPolicy, operation ConfigureBackup, and status Completed. This proves setup completed, not that a backup has finished.

05 Check VM-2 policy assignment

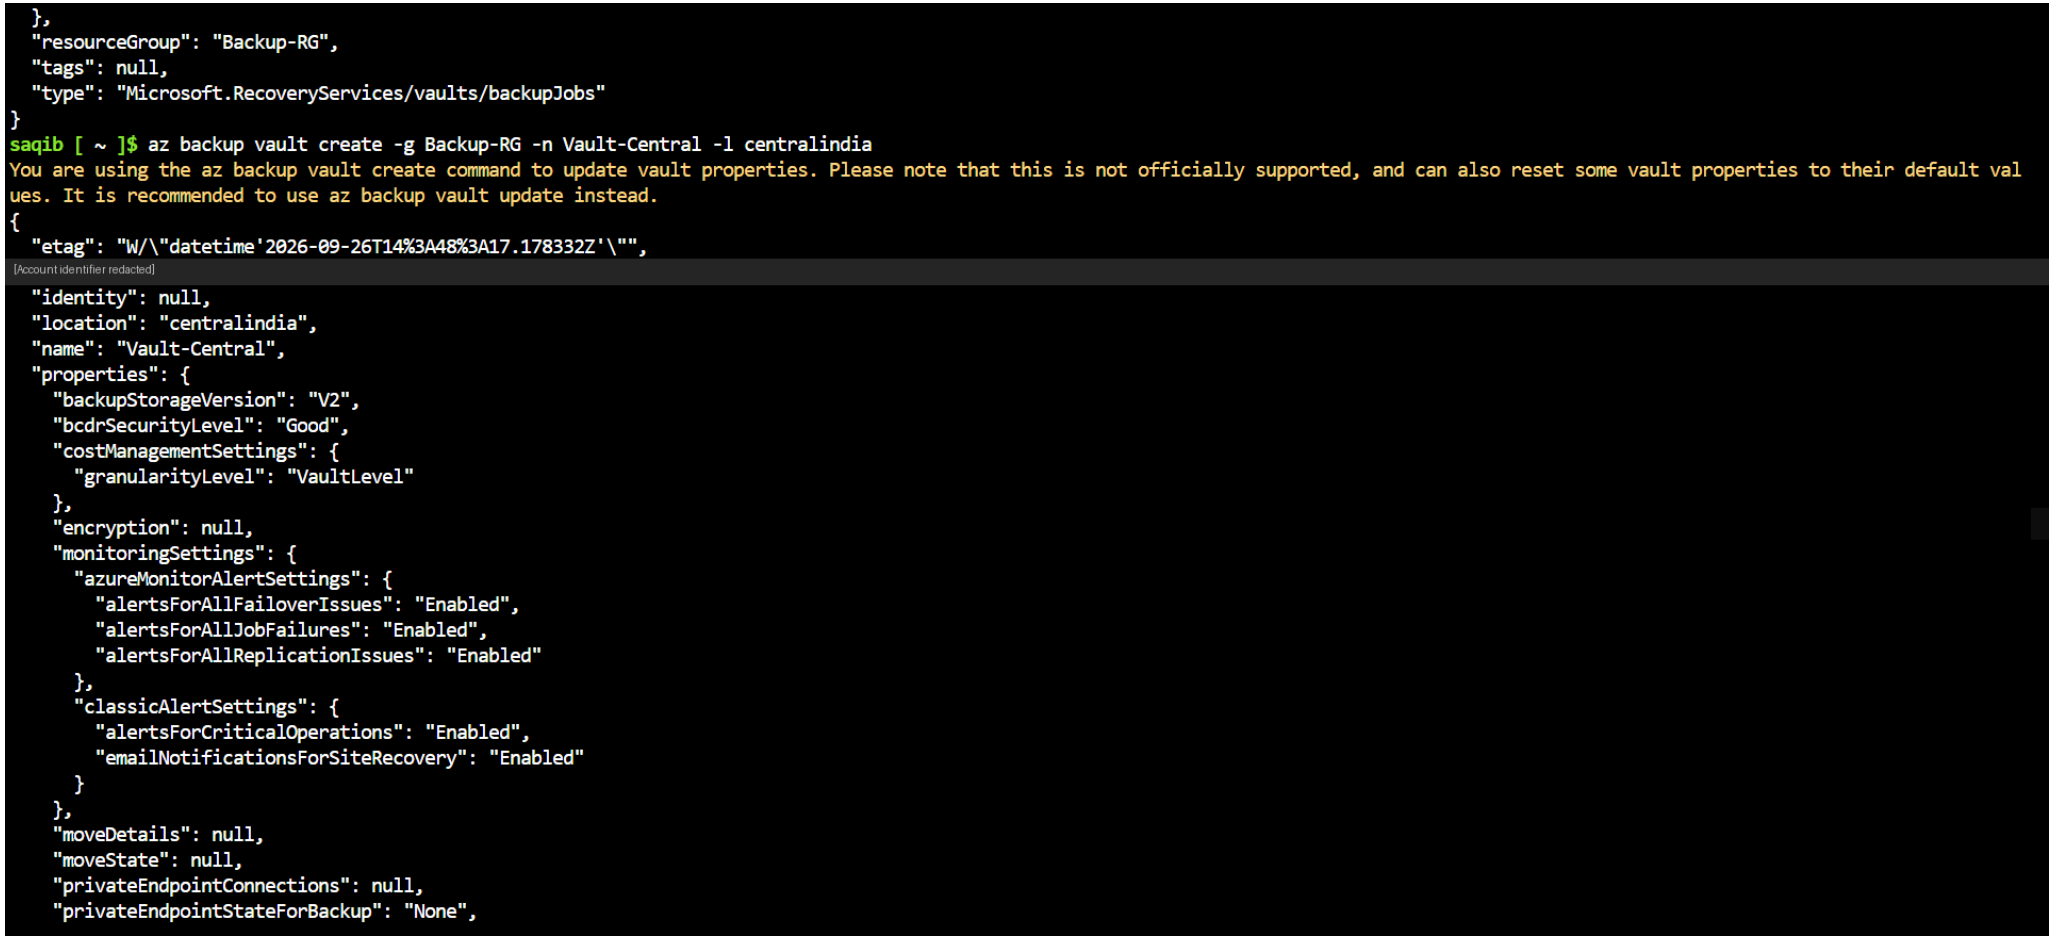

Review the configuration output for VM-2.

```
    "jobType": "AzureIaaSVMJob",
    "operation": "ConfigureBackup",
    "startTime": "2026-09-26T14:42:34.380031+00:00",
    "status": "Completed",
    "virtualMachineVersion": "Compute"
  },
  "resourceGroup": "Backup-RG",
  "tags": null,
  "type": "Microsoft.RecoveryServices/vaults/backupJobs"
}
Starting in May 2025, Trusted Launch virtual machines can be protected with both standard and enhanced policies via PS and CLI
{
  "eTag": null,
[Account identifier redacted]
[Account identifier redacted]
  "location": null,
  "name": "2fe72f64-42dc-4506-a01f-6666cc145123",
  "properties": {
    "actionsInfo": null,
    "activityId": "1b528aa6-b9b9-11f1-8e3c-00155d16360d",
    "backupManagementType": "AzureIaasVM",
    "containerName": "iaasvmcontainerv2;backup-rg;vm-2",
    "duration": "0:01:10.892767",
    "endTime": "2026-09-26T14:48:09.730173+00:00",
    "entityFriendlyName": "vm-2",
    "errorDetails": null,
    "extendedInfo": {
      "dynamicErrorMessage": null,
      "estimatedRemainingDuration": null,
      "internalPropertyBag": null,
      "progressPercentage": null,
      "propertyBag": {
        "Policy Name": "DefaultPolicy",
        "VM Name": "vm-2"
      },
      "tasksList": []
```

What this shows: This capture identifies VM-2 and DefaultPolicy. The later job table confirms ConfigureBackup completed for both VMs.

06 Avoid repeating vault creation

A vault-create command was run again after the vault already existed.

What this shows: Azure warns that using create to update an existing vault is not officially supported. This warning is retained as part of the execution history; it is not a required setup step.

07 Review repeated protection errors

Repeated enable-protection commands returned a VM-not-found message.

```
  "sku": {
    "capacity": null,
    "family": null,
    "name": "Standard",
    "size": null,
    "tier": null
  },
  "systemData": null,
  "tags": null,
  "type": "Microsoft.RecoveryServices/vaults"
}
saqib [ ~ ]$ az backup protection enable-for-vm -g Backup-RG --vault-name Vault-Central --vm VM-1 --policy-name DefaultPolicy
Starting in May 2025, Trusted Launch virtual machines can be protected with both standard and enhanced policies via PS and CLI

                The specified Azure Virtual Machine Not Found. Possible causes are
                   1. VM does not exist
                   2. The VM name or the Service name needs to be case sensitive
                   3. VM is already Protected with same or other Vault.
                      Please Unprotect VM first and then try to protect it again.

                Please contact Microsoft for further assistance.

saqib [ ~ ]$ az backup protection enable-for-vm -g Backup-RG --vault-name Vault-Central --vm VM-2 --policy-name DefaultPolicy
Starting in May 2025, Trusted Launch virtual machines can be protected with both standard and enhanced policies via PS and CLI

                The specified Azure Virtual Machine Not Found. Possible causes are
                   1. VM does not exist
                   2. The VM name or the Service name needs to be case sensitive
                   3. VM is already Protected with same or other Vault.
                      Please Unprotect VM first and then try to protect it again.

                Please contact Microsoft for further assistance.

saqib [ ~ ]$
saqib [ ~ ]$
saqib [ ~ ]$
```

What this shows: The message lists several possible causes; this capture alone does not identify which one applied. The completed configuration jobs and later successful backup establish the final outcome.

08 Repeated error screenshot

This is a repeated capture of the protection error on the previous page.

```
  "sku": {
    "capacity": null,
    "family": null,
    "name": "Standard",
    "size": null,
    "tier": null
  },
  "systemData": null,
  "tags": null,
  "type": "Microsoft.RecoveryServices/vaults"
}
saqib [ ~ ]$ az backup protection enable-for-vm -g Backup-RG --vault-name Vault-Central --vm VM-1 --policy-name DefaultPolicy
Starting in May 2025, Trusted Launch virtual machines can be protected with both standard and enhanced policies via PS and CLI

                The specified Azure Virtual Machine Not Found. Possible causes are
                   1. VM does not exist
                   2. The VM name or the Service name needs to be case sensitive
                   3. VM is already Protected with same or other Vault.
                      Please Unprotect VM first and then try to protect it again.

                Please contact Microsoft for further assistance.

saqib [ ~ ]$ az backup protection enable-for-vm -g Backup-RG --vault-name Vault-Central --vm VM-2 --policy-name DefaultPolicy
Starting in May 2025, Trusted Launch virtual machines can be protected with both standard and enhanced policies via PS and CLI

                The specified Azure Virtual Machine Not Found. Possible causes are
                   1. VM does not exist

                   3. VM is already Protected with same or other Vault.
                      Please Unprotect VM first and then try to protect it again.

                Please contact Microsoft for further assistance.

saqib [ ~ ]$
saqib [ ~ ]$
saqib [ ~ ]$
```

What this shows: Retained to include every supplied image. It adds no new verification result.

09 Start the manual backup

Run backup-now for VM-1 with AzureIaasVM and the requested retention date.

```
saqib [ ~ ]$
saqib [ ~ ]$
saqib [ ~ ]$
saqib [ ~ ]$
saqib [ ~ ]$ az backup protection backup-now -g Backup-RG --vault-name Vault-Central --container-name VM-1 --item-name VM-1 --retain-until 26-10-2026
--backup-management-type is required when providing container's friendly name.
saqib [ ~ ]$ az backup protection backup-now -g Backup-RG --vault-name Vault-Central --container-name VM-1 --item-name VM-1 --backup-management-type AzureIaaSVM --retain-until 26-10-2026
Datetime with no tzinfo will be considered UTC.
{
  "eTag": null,
[Account identifier redacted]
[Account identifier redacted]
  "location": null,
  "name": "9e52b967-dbde-4cbd-9418-691028938cd7",
  "properties": {
    "actionsInfo": [
      "Cancellable"
    ],
    "activityId": "38bc22a4-b9ba-11f1-90a1-00155d16360d",
    "backupManagementType": "AzureIaasVM",
    "containerName": "iaasvmcontainerv2;backup-rg;vm-1",
    "duration": "0:00:02.605660",
    "endTime": null,
    "entityFriendlyName": "vm-1",
    "errorDetails": null,
    "extendedInfo": {
      "dynamicErrorMessage": null,
      "estimatedRemainingDuration": null,
      "internalPropertyBag": {
        "IsInstantRpJob": "True"
      },
      "progressPercentage": null,
      "propertyBag": {
        "Recovery Point Expiry Time in UTC": "10/26/2026 12:00:00 AM",
        "VM Name": "vm-1",
```

What this shows: The first attempt lacked --backup-management-type. The corrected command returned a backup job. The requested expiry was 26 October 2026 at 00:00 UTC.

10 Inspect the backup tasks

Review the snapshot and data-transfer tasks.

```
  "errorDetails": null,
  "extendedInfo": {
    "dynamicErrorMessage": null,
    "estimatedRemainingDuration": null,
    "internalPropertyBag": {
      "IsInstantRpJob": "True"
    },
    "progressPercentage": null,
    "propertyBag": {
      "Recovery Point Expiry Time in UTC": "10/26/2026 12:00:00 AM",
      "VM Name": "vm-1",
[Account identifier redacted]
    },
    "tasksList": [
      {
        "duration": "0:00:01.082687",
        "endTime": "0001-01-01T00:00:00",
        "instanceId": null,
        "progressPercentage": null,
        "startTime": "2026-09-26T14:54:53.827276+00:00",
        "status": "InProgress",
        "taskExecutionDetails": null,
        "taskId": "Take Snapshot",
        "taskType": "Normal"
      },
      {
        "duration": "0:00:00",
        "endTime": "0001-01-01T00:00:00",
        "instanceId": null,
        "progressPercentage": null,
        "startTime": "0001-01-01T00:00:00",
        "status": "NotStarted",
        "taskExecutionDetails": null,
        "taskId": "Transfer data to vault",
        "taskType": "Normal"
      },
```

What this shows: Take Snapshot is InProgress and Transfer data to vault is NotStarted in this early capture. These are intermediate states, not final results.

11 Monitor the backup job

Use az backup job list to follow progress.

```
        "instanceId": null,
        "progressPercentage": null,
        "startTime": "0001-01-01T00:00:00",
        "status": "NotStarted",
        "taskExecutionDetails": null,
        "taskId": "Validate Backup",
        "taskType": "Normal"
      }
    ]
  },
  "isUserTriggered": null,
  "jobType": "AzureIaaSVMJob",
  "operation": "Backup",
  "startTime": "2026-09-26T14:54:52.131784+00:00",
  "status": "InProgress",
  "virtualMachineVersion": "Compute"
 },
 "resourceGroup": "Backup-RG",
 "tags": null,
 "type": "Microsoft.RecoveryServices/vaults/backupJobs"
}
saqib [ ~ ]$ az backup job list -g Backup-RG --vault-name Vault-Central --output table
Name                                  Operation        Status      Item Name    Backup Management Type    Start Time UTC                    Duration

Name           Type                                Location
-------------  ----------------------------------  ------------
Vault-Central  Microsoft.RecoveryServices/vaults  centralindia
saqib [ ~ ]$ az backup job list \
  --resource-group Backup-RG \
  --vault-name Vault-Central \
                                                                Desktop 1
```

What this shows: Afterward, the resource list shows only Vault-Central in Backup-RG. The original VMs were gone. This was early cleanup, not an originally planned failure test; recovery was then demonstrated from the retained backup.

13 Confirm the backup and recovery point

List backup jobs and VM-1 recovery points.

```

saqib [ ~ ]$ ^[[200~az backup job list --resource-group Backup-RG --vault-name Vault-Central --output table~
```

What this shows: Repeated checks show the same restore job running. These entries demonstrate monitoring, not multiple successful restores.

17 Inspect details while waiting

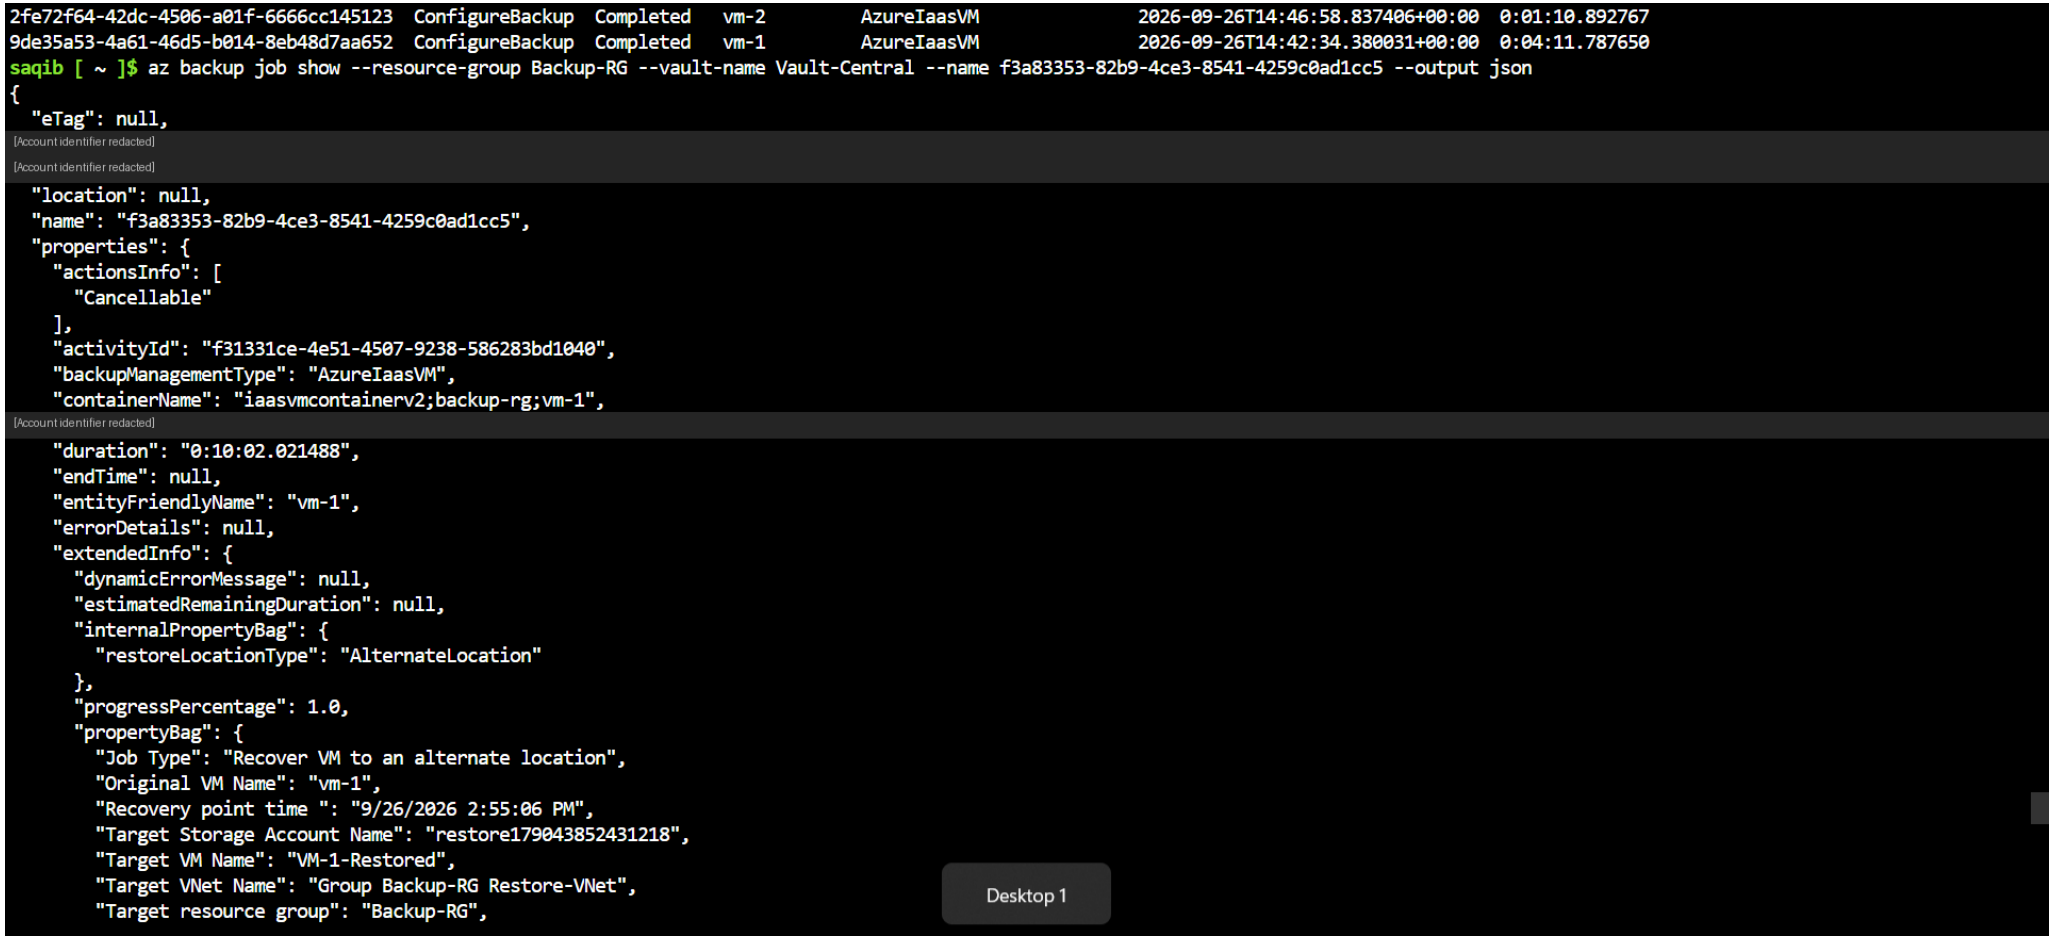

After a pasted command failed, rerun it cleanly and inspect the restore job.

```

saqib [ ~ ]$ az backup job show --resource-group Backup-RG --vault-name Vault-Central --name f3a83353-82b9-4ce3-8541-4259c0ad1cc5 --output json
{
  "eTag": null,
[Account identifier redacted]
[Account identifier redacted]
  "location": null,
  "name": "f3a83353-82b9-4ce3-8541-4259c0ad1cc5",
  "properties": {
    "actionsInfo": [
      "Cancellable"
    ],
    "activityId": "f31331ce-4e51-4507-9238-586283bd1040",
```

What this shows: The pasted escape characters caused a Bash command-not-found error. The corrected query works and shows the restore still running.

18 Confirm the restore destination

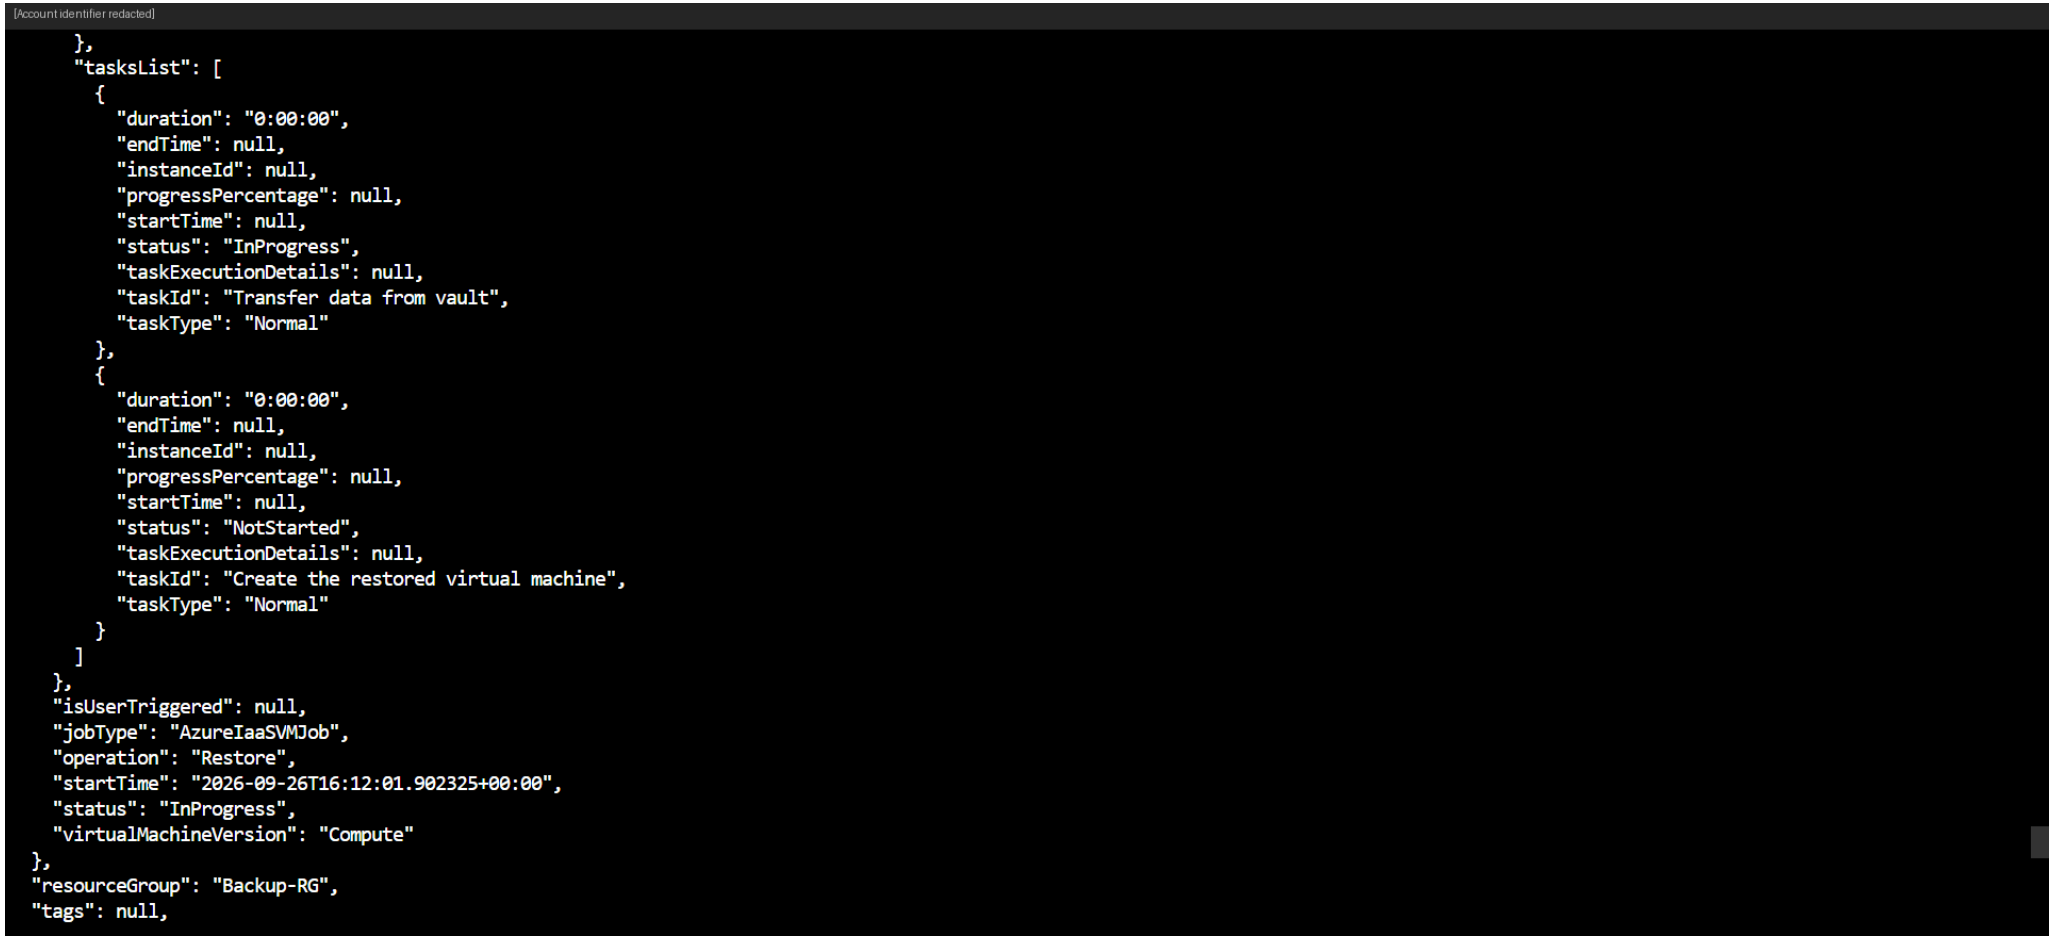

Read the restore job properties.

What this shows: The job records recovery to an alternate location, target VM-1-Restored, Backup-RG, Restore-VNet, and the staging account. No error is reported in this capture.

19 Understand the two restore stages

Inspect the task list while the job runs.

What this shows: Transfer data from vault is InProgress. Create the restored virtual machine is NotStarted. VM creation follows data transfer.

20 Watch the transfer finish

Query task status again after waiting.

```
  "type": "Microsoft.RecoveryServices/vaults/backupJobs"
}
saqib [ ~ ]$ az backup job show --resource-group Backup-RG --vault-name Vault-Central --name f3a83353-82b9-4ce3-8541-4259c0ad1cc5 --query "properties.{Status:status,Duration:duration,Tasks:
extendedInfo.tasksList[].{Step:taskId,Status:status},Errors:errorDetails}" --output json
{
  "Duration": "0:11:10.616251",
  "Errors": null,
  "Status": "InProgress",
  "Tasks": [
    {
      "Status": "InProgress",
      "Step": "Transfer data from vault"
    },
    {
      "Status": "NotStarted",
      "Step": "Create the restored virtual machine"
    }
  ]
}
saqib [ ~ ]$ az backup job show --resource-group Backup-RG --vault-name Vault-Central --name f3a83353-82b9-4ce3-8541-4259c0ad1cc5 --query "properties.{Status:status,Duration:duration,Tasks:
extendedInfo.tasksList[].{Step:taskId,Status:status},Errors:errorDetails}" --output json
{
  "Duration": "0:14:15.948236",
  "Errors": null,
  "Status": "InProgress",
  "Tasks": [
    {
      "Status": "Completed",
      "Step": "Transfer data from vault"
    },
    {
      "Status": "InProgress",
      "Step": "Create the restored virtual machine"
    }
  ]
}
```

What this shows: Data transfer changes to Completed, and VM creation changes to InProgress. This confirms progress to the second stage.

21 Prove that the restored VM works

Check the completed restore, VM state, and Windows response.

```
    {
      "Status": "InProgress",
      "Step": "Create the restored virtual machine"
    }
  ]
}
saqib [ ~ ]$ okay
bash: okay: command not found
saqib [ ~ ]$ az backup job show --resource-group Backup-RG --vault-name Vault-Central --name f3a83353-82b9-4ce3-8541-4259c0ad1cc5 --query "properties.{Status:status,Duration:duration,Tasks:
extendedInfo.tasksList[].{Step:taskId,Status:status},Errors:errorDetails}" --output json
{
  "Duration": "0:15:52.995991",
  "Errors": null,
  "Status": "Completed",
  "Tasks": [
    {
      "Status": "Completed",
      "Step": "Transfer data from vault"
    },
    {
      "Status": "Completed",
      "Step": "Create the restored virtual machine"
    }
  ]
}
saqib [ ~ ]$ az vm get-instance-view --resource-group Backup-RG --name VM-1-Restored --query "instanceView.statuses[].{Code:code,Status:displayStatus}" --output table
Code                        Status
--------------------------  ---------------------
ProvisioningState/succeeded  Provisioning succeeded
PowerState/running          VM running
saqib [ ~ ]$ az vm run-command invoke --resource-group Backup-RG --name VM-1-Restored --command-id RunPowerShellScript --scripts 'Get-CimInstance Win32_OperatingSystem | Select-Object CSNam
e,Caption,Version,LastBootUpTime | Format-List' --query "value[].message" --output tsv
CSName         : VM-1
Caption        : Microsoft Windows Server 2022 Datacenter
Version        : 10.0.20348
LastBootUpTime : 9/26/2026 4:27:09 PM
```

What this shows: Restore finishes in 15 minutes 53 seconds with no reported errors. Provisioning succeeded, the VM is running, and Run Command returns Windows Server 2022 Datacenter, version 10.0.20348.

22 Deallocate after collecting evidence

After Windows verification, run az vm deallocate for VM-1-Restored.

```
saqib [ ~ ]$ okay
bash: okay: command not found
saqib [ ~ ]$ az backup job show --resource-group Backup-RG --vault-name Vault-Central --name f3a83353-82b9-4ce3-8541-4259c0ad1cc5 --query "properties.{Status:status,Duration:duration,Tasks:
extendedInfo.tasksList[].{Step:taskId,Status:status},Errors:errorDetails}" --output json
{
  "Duration": "0:15:52.995991",
  "Errors": null,
  "Status": "Completed",
  "Tasks": [
    {
      "Status": "Completed",
      "Step": "Transfer data from vault"
    },
    {
      "Status": "Completed",
      "Step": "Create the restored virtual machine"
    }
  ]
}
saqib [ ~ ]$ az vm get-instance-view --resource-group Backup-RG --name VM-1-Restored --query "instanceView.statuses[].{Code:code,Status:displayStatus}" --output table
Code                         Status
---------------------------  --------------------
ProvisioningState/succeeded  Provisioning succeeded
PowerState/running           VM running
saqib [ ~ ]$ az vm run-command invoke --resource-group Backup-RG --name VM-1-Restored --command-id RunPowerShellScript --scripts 'Get-CimInstance Win32_OperatingSystem | Select-Object CSNam
e,Caption,Version,LastBootUpTime | Format-List' --query "value[].message" --output tsv
CSName         : VM-1
Caption        : Microsoft Windows Server 2022 Datacenter
Version        : 10.0.20348
LastBootUpTime : 9/26/2026 4:27:09 PM

saqib [ ~ ]$ az vm deallocate --resource-group Backup-RG --name VM-1-Restored
saqib [ ~ ]$
```

Desktop 1

What this shows: The command returns to the prompt without a visible error. A separate Stopped (deallocated) state check is not shown. Disk, storage, and backup charges may continue; final cleanup is not evidenced.

How to show the professor

Use these four checks. Run them in Azure Cloud Shell (Bash) while the required resources still exist.

1. Show backup completion

```
az backup job list -g Backup-RG --vault-name Vault-Central -o table
```

Expected: VM-1 Backup = Completed. Evidence: page 14.

2. Show application consistency

```
az backup recoverypoint list -g Backup-RG --vault-name Vault-Central
--container-name vm-1 --item-name vm-1 --backup-management-type AzureIaasVM -o table
```

Expected: Recovery point consistency = AppConsistent. Evidence: page 14.

3. Show restore completion

```
az backup job show -g Backup-RG --vault-name Vault-Central
--name f3a83353-82b9-4ce3-8541-4259c0ad1cc5 --query properties.status -o tsv
```

Expected: Completed. Evidence: page 22.

4. Show the restored VM state

```
az vm get-instance-view -g Backup-RG -n VM-1-Restored
--query "instanceView.statuses[].displayStatus" -o table
```

Expected: VM running during verification; after deallocation, Stopped (deallocated). Evidence: pages 22-23.

Commands are wrapped for reading. Join each wrapped command into one line before pasting. A live Windows check requires the VM to be running; starting it resumes compute usage.

What the project proves

Result: Azure Backup successfully recovered the deleted VM-1 as VM-1-Restored. The restored operating system started and responded to a Windows command.

Measured results

Backup duration: 41 min 24 sec
Restore job duration: 15 min 53 sec
Recovery point: AppConsistent
Restored OS: Windows Server 2022 Datacenter
Windows computer name: VM-1
Azure resource name: VM-1-Restored

Limits of this test

VM-2 protection was configured, but its backup and recovery were not demonstrated.

No separate file-hash or database recovery test was performed. Policy schedule and full retention settings were not captured. The restore duration is a job measurement, not a guaranteed recovery time.

Cost control and cleanup

Deallocation was issued after evidence collection. Confirm the deallocated state, then review remaining disks, staging storage, backup items, and restore-point resources. Follow the vault deletion prerequisites when cleanup is approved. The screenshots do not prove complete cleanup or zero ongoing cost.
